

Command Reference: CheckDiversionsStations()

Check diversion stations data for problems

StateMod Command

Version 3.09.01, 2010-02-01

The CheckDiversionsStations () command checks diversion stations data for problems. The command should usually be used with a WriteCheckFile () command at the end of a command file.

The following dialog is used to edit the command and illustrates the syntax of the command.

Edit CheckDiversionsStations() Command

This command checks diversion stations, generating warnings for the follow conditions:

- 1) Missing (undefined) required values.
- 2) Invalid values.
- 3) River network ID is not found in the network (if network node list is available).
- 4) Daily ID is not a diversion (if diversion station list is available).

Diversion station identifier: * Required - specify the diversion stations to check (use * for wildcard).

If not found: Warn Optional - indicate action if no match is found (default=Warn).

Command: CheckDiversionsStations (ID="*")

OK Cancel

CheckDiversionsStations

CheckDiversionsStations() Command Editor

The command syntax is as follows:

```
CheckDiversionsStations (Parameter=Value,...)
```

Command Parameters

Parameter	Description	Default
ID	The identifier for the location(s) to check. Use * to match a pattern.	None – must be specified.
IfNotFound	One of the following: <ul style="list-style-type: none">• Fail – generate a failure message if the location identifier is not matched• Ignore – ignore (don't generate a message) if the location identifier is not matched• Warn – generate a warning message if the location identifier is not matched	Warn

The following excerpt from a command file illustrates how diversion stations can be checked and written to a StateMod file:

```
#  
# Create direct diversion stations file  
#  
WriteDiversionStationsToStateMod(OutputFile="..\STATEMOD\cm2005.dds")  
#  
# Check the results  
CheckDiversionStations (ID="*")  
WriteCheckFile(OutputFile="dds.commands.StateDMI.check.html")
```
