Command Reference: ReadDelayTablesDailyFromStateMod()

**Read delay tables (daily) data from a StateMod file**

StateMod Command
Version 3.09.01, 2010-02-01

The `ReadDelayTablesDailyFromStateMod()` command reads delay tables (daily) from a StateMod delay tables file. For example, this command may be used to convert a delay table file between fraction and percent.

The following dialog is used to edit the command and illustrates the syntax of the command.

ReadDelayTablesDailyFromStateMod

ReadDelayTablesDailyFromStateMod() Command Editor

The command syntax is as follows:

        ReadDelayTablesDailyFromStateMod(Parameter=Value,…)

Command Parameters

Parameter	Description	Default
InputFile	The name of the input file to read, surrounded by double quotes.	None – must be specified.
Scale	If the StateMod delay table values are specified as fractions rather than percent, a scale of 100 can be used to convert the StateMod delay tables to percent.	If not specified, no scale is applied to the delay values.
