# Command Reference: */
Comment block end

General Command
Version 3.08.02, 2010-01-06

The `*/` command ends a multi-line comment block and is useful for inserting long comments or temporarily commenting out blocks of commands. See also the `/*` and `#` commands. Commands between the `/*` and `*/` are not converted to comments but are skipped during processing.

The following dialog is used to edit the command and illustrates the command syntax:

CommentBlockEnd

*/ Command Editor

The command syntax is as follows:

```
*/
```

A sample command file is as follows:

```
/*
SomeCommentedOutCommands()…
*/
```
