# Command Reference:
ReadResponseFromStateMod()

Read response file data from a StateMod response file

StateMod Command
Version 3.12.00, 2011-01-17

The `ReadResponseFromStateMod()` command reads a StateMod response file, which contains the list of files in a data set. The primary purpose of this command currently is to facilitate software testing of reading and writing the response file; however, in the future the functionality may be enhanced. The response file can be written using the `WriteResponseToStateMod()` command.

The following dialog is used to edit the command and illustrates the syntax of the command.

ReadResponseFromStateMod() Command Editor

The command syntax is as follows:

```
ReadResponseFromStateMod(Parameter=Value,…)
```

Command Parameters

Parameter	Description	Default
